**Follow**

### Who should I follow?

- Researchers you know
- Researchers in your field
- Researchers whose work you are interested in

### Why follow people?

Following other researchers helps build your network and increases the visibility of your own research. It's also the best way to stay up to date with what your peers are working on and publishing.

Abstract  
We have studied the physical organization of genes and non-coding DNA in two Allium species, *A. cepa* and *A. fistulosum*. Expressed sequence tags (ESTs) clones and polymerase chain reaction (PCR) products of gene fragments obtained with primers designed for the gene sequences available in the public GenBank were physically mapped onto chromosomes using a Tyr-FISH technique. The allinase and lacrymatory factor
